- git - I don't know but it seems we have a different patching version joanki: ok, that might be why so i would do it and be done with it, until i have to again joanki: we're not in #ubuntu-devel right now, but if we were, i would suggest trying to use the appropriate build-deps omapui1 know, but he had to do it because since i don't know how to make that dir joanki: i'd recommend using synaptice to download the necessary packages, instead of apt-get joanki: i imagine you'd be re-adding the right repos when you update your sources list what? oh ok joanki: synaptic is a package manager that you can use instead of apt-get *apt-get/apt-get/apt-get* has anyone here got a laptop with a intel 845g chipset? anyone probably 90% of the first questions asked in this channel start with "Does anyone/anybody/..." Why not ask your next question (the real one) and find out? hehe noone knows the answer to that just like no one in the chan knows the answer to joanki's question Can someone point me to a site that explains the different types of packages? Like main, restricted, non-free and multiverse, how to install them and so on. !multiverse somebody said multiverse was at A list of official repositories can be found at (Hoary) or (Breezy) ive got a intel 82175476af
